## Course Description

### Basic Principles

September 22, 2014

This session will introduce the course, discuss the limit states related to connection design as well as explore the methods of specifying connections as described in the *AISC Code of Standard Practice*. The session will then discuss that connection design is based on first principles, without the aid of complex computer models and with little codification. It will address the three basic principles of structural mechanics: equilibrium, constitutive equations (limit states), and compatibility. The presentation will then focus on the Lower Bound Theorem and look at it from a practical approach: satisfying equilibrium, not exceeding any limit states, and taking measures to ensure ductility. A simplified example demonstrating the concepts of the Lower Bound Theorem will be presented.

---

There's always a solution in Steel

## Learning Objectives

- Become familiar with the common limit states of connection design and where they can be found in the *AISC Specification*.
- Gain an understanding of the three methods of specifying connections described in the *AISC Code of Standard Practice*.
- Gain an understanding of the basic principles of structural mechanics: equilibrium, constitutive equations and compatibility.
- Become familiar with the Lower Bound Theorem.

## Bracing Connections and Related Topics Session 1: Basic Principles

Presented by  
**William A. Thornton, Ph.D., P.E.**  
Corporate Consultant to Cives Corporation  
Roswell, GA

There's always a solution in steel.

# Bracing Connections and Related Topics

By: William Thornton

---

There's always a solution in steel

## Course Outline

1. Basic Principles
2. Uniform Force Method
3. Bracing Connection Details and Prying Action
4. Vertical Bracing Connections – Corner Part 1
5. Vertical Bracing Connections – Corner Part 2
6. Chevron Gussets for Wind or Low-Seismic
7. Chevron Gussets for High Seismic
8. Additional Connection Topics

---

16

## Limit States - the *Specification*, *Manual*, and Other Documents

There's always a solution in steel

17

## Connection Limit States

- In this section we will briefly discuss common connection limit states and where they can be found in the AISC Specification.
- The organization of the Steel Construction Manual as it relates to connection design will be reviewed.
- Finally, since not everything can be contained in these two documents, other useful resources are also presented.

There's always a solution in steel

18

## Connection Limit States

**The Limit States Governing Connection Design are found in:**

1. Chapter B: Local Buckling
2. Chapter D: Net Tension/Shear Lag
3. Chapter J: Connections
4. Chapter K: HSS Members
5. Appendix 3: Fatigue
6. AISC Seismic Documents:

## Connection Design and the Code of Standard Practice

There's always a solution in steel

36

## Connection Design and the COSP

### Three Options Listed in COSP:

- 1) The complete connection design is shown on the structural drawings (EOR mandated).
- 2) Experienced detailer to select connections based on structural drawings or Manual.
- 3) Connections designated to be designed by licensed engineer working for fabricator.

There's always a solution in steel

37

## Connection Design and the COSP

- 1) For option 1 (EOR Mandated): all information is needed:
  - a. Bolt sizes, spacing, and edge distances
  - b. Bolt gage
  - c. Weld sizes and type (e.g. fillet, PJP, etc.)
  - d. Plate thicknesses, sizes, and grade
  - e. Etc.

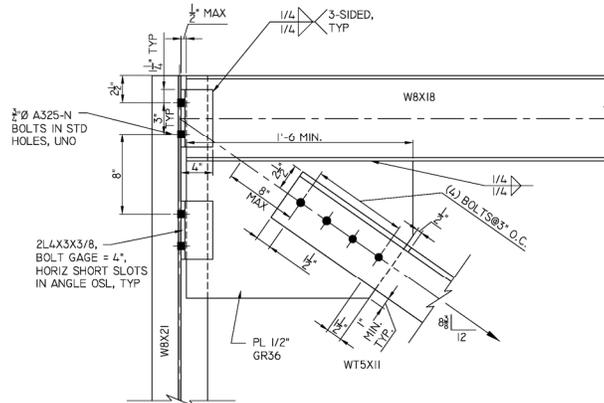

There's always a solution in steel

42

## Basis of Connection Design

There's always a solution in steel

43

## Basis of Connection Design

- Connection Design Tools and Methods
- Assumptions and Uncertainty
- Lower Bound Theorem
- Connection Design: Art and Science

There's always a solution in steel

44

## Connection Design

Connection design has been called the

### **Last Bastion of Rational Design**

Most connection design is accomplished

- based on first principles
- without the aid of complex computer models
- with little codification

There's always a solution in steel

45

## Economy Through Connection Design

In no other important industry is the responsibility for design so far removed from the responsibility for production.

~~~Sir Harold Emerson  
Minister of the Works  
(1962)

It has been estimated that 50% of the cost of erected steel is related to the connection design.

There's always a solution in steel

46

## Connection Design

Primary tools used by the connection designer

- Free body diagrams
- The Lower Bound Theorem
- Empirical Data (distilled into rational design procedures)
- Intuition based on experience

There's always a solution in steel

47

## Analysis of Connections

There's always a solution in steel

48

**We do not know the distribution of forces in the structures we design.**

There's always a solution in steel

49

**Assumptions routinely made during the analysis process:**

- Isotropic
- Homogenous
- Elastic
- Perfectly Plastic
- Pinned
- Fixed
- Laterally Supported
- Torsionally Restrained
- And Many, Many More

There's always a solution in steel

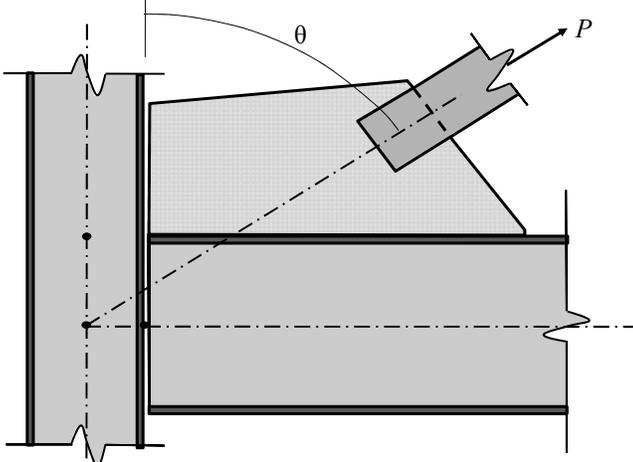

50

“Pinned” Truss Connections <sup>51</sup>

A vertical brace connection is a highly indeterminate system

There's always a solution in steel

52

## Uniform Force Method

$$r = \sqrt{(\alpha + e_c)^2 + (\beta + e_b)^2}$$

$$V_c = \frac{\beta}{r} P \quad H_c = \frac{e_c}{r} P$$

$$V_b = \frac{e_b}{r} P \quad H_b = \frac{\alpha}{r} P$$

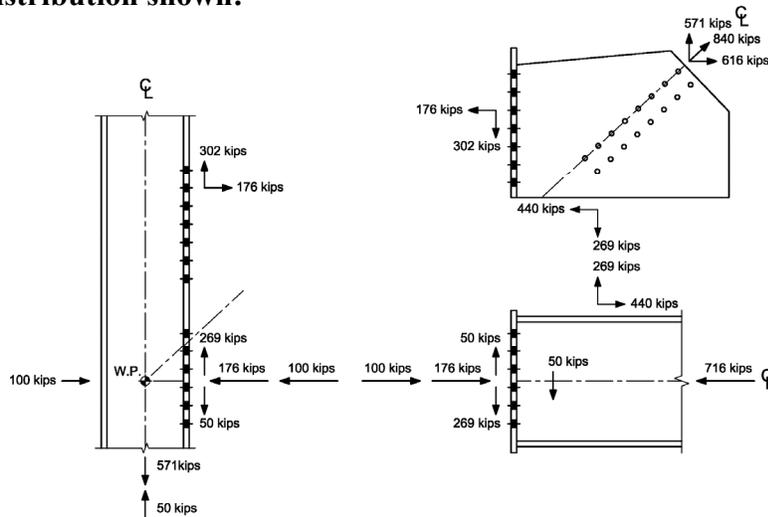

These equations represent one of an infinite number of statically admissible force distributions.

There's always a solution in steel

53

In a specific connection the UFM produces the force distribution shown:

There's always a solution in steel

54

**In a specific connection the UFM produces the force distribution shown:**

**The actual numbers would be difficult to follow and are really immaterial at this point.**

 There's always a solution in steel 55

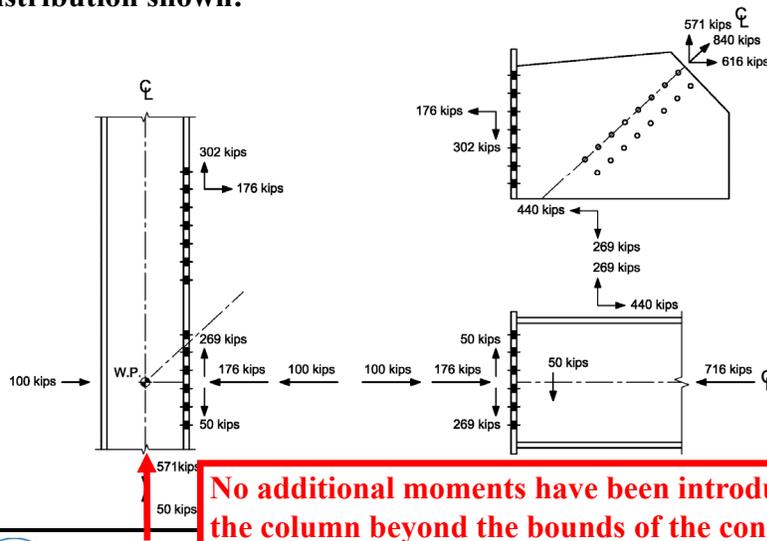

**In a specific connection the UFM produces the force distribution shown:**

**However, there are several important items to note in the final force distribution.**

 There's always a solution in steel 56

In a specific connection the UFM produces the force distribution shown:

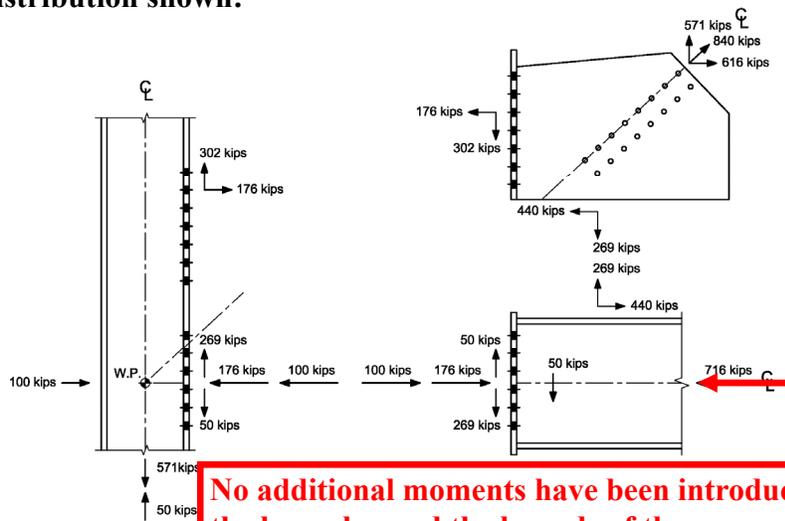

**No additional moments have been introduced to the column beyond the bounds of the connection**

There's always a solution in steel

57

In a specific connection the UFM produces the force distribution shown:

**No additional moments have been introduced to the beam beyond the bounds of the connection**

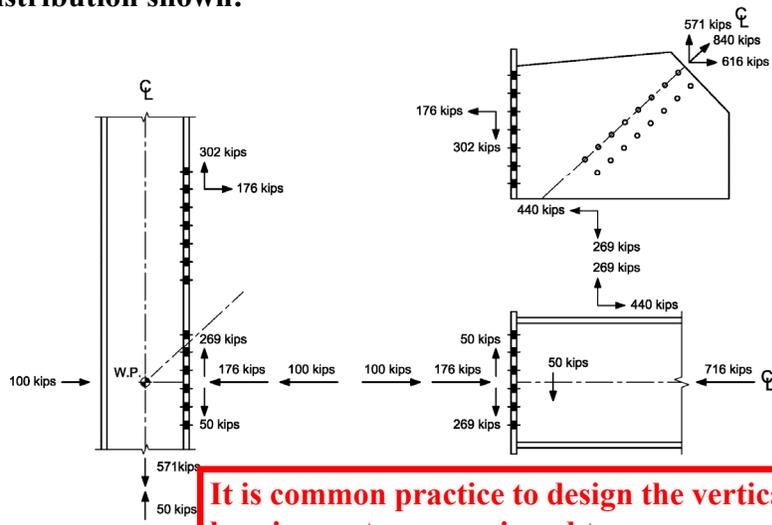

There's always a solution in steel

58

In a specific connection the UFM produces the force distribution shown:

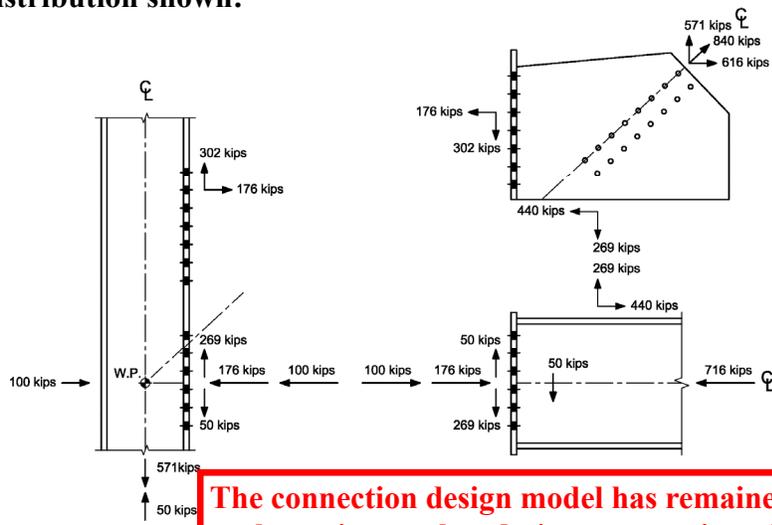

**It is common practice to design the vertical bracing system as a pinned truss.**

There's always a solution in steel

In a specific connection the UFM produces the force distribution shown:

**The connection design model has remained true to the main member design assumptions. This is a basic tenet of connection design.**

## Angle Gages

There's always a solution in steel

62

**Question:**  
**But how do we know this is the force  
distribution in the connection?**

There's always a solution in steel

63

**Answer:**  
**We Don't**

There's always a solution in steel

64

**Answer:  
We Don't  
And it probably isn't.**

There's always a solution in steel

65

**Steel is smarter than the engineers  
who design it.**

~~~ **Jim Wooten**

**MSC 2<sup>nd</sup> Qtr 1971**

There's always a solution in steel

66

## Lower Bound Theorem

The applied external forces in equilibrium with the internal force field are less than or, at most, equal to the applied external force that would cause failure, provided that all the limit states are satisfied and sufficient ductility exists to allow redistribution of the forces.

~~~From Baker, Neal, etc.

There's always a solution in steel

67

## Lower Bound Theorem A Practical Approach

1. Choose a force distribution that satisfies equilibrium.
2. Do not exceed any limit states.
3. Take reasonable measures to ensure ductility.

There's always a solution in steel

68

## What Does This Mean?

- A designer has the freedom to choose any convenient force distribution as long as:
  - Equilibrium is satisfied
  - No limit states are exceeded
  - And loads can redistribute without fracture

There's always a solution in steel

69

## Why?

- Force is attracted to stiffness.
- When a member yields it becomes less stiff and sheds loads to other elements.
- If there is somewhere for the load to go, it will go there.
- Steel is inherently ductile.

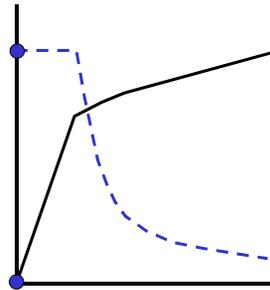

There's always a solution in steel

70

## Change in Stiffness Related to Yielding

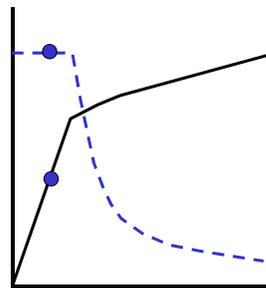

- The black line represents stress versus strain.
- The blue dashed line represents the modulus of elasticity,  $E$ , versus strain.
- As the material yields the effective  $E$ , and therefore the stiffness, decreases and the load redistributes.

There's always a solution in steel

71

## Change in Stiffness Related to Yielding

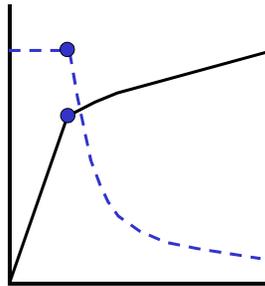

- The black line represents stress versus strain.
- The blue dashed line represents the modulus of elasticity,  $E$ , versus strain.
- As the material yields the effective  $E$ , and therefore the stiffness, decreases and the load redistributes.

There's always a solution in steel

72

## Change in Stiffness Related to Yielding

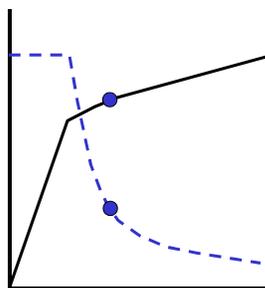

- The black line represents stress versus strain.
- The blue dashed line represents the modulus of elasticity,  $E$ , versus strain.
- As the material yields the effective  $E$ , and therefore the stiffness, decreases and the load redistributes.

There's always a solution in steel

73

## Change in Stiffness Related to Yielding

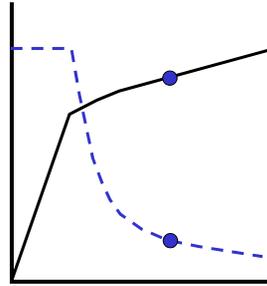

- The black line represents stress versus strain.
- The blue dashed line represents the modulus of elasticity,  $E$ , versus strain.
- As the material yields the effective  $E$ , and therefore the stiffness, decreases and the load redistributes.

There's always a solution in steel

- As the material yields the effective  $E$ , and therefore the stiffness, decreases and the load redistributes.

There's always a solution in steel

76

## Connections: Art and Science

- The ART of load paths - An intuitive knowledge of how a system will transmit loads.
- The SCIENCE of equilibrium and limit states - an understanding of structural mechanics.

There's always a solution in steel

77

**The art involves finding the load path which maximizes the external load.**

~ ~ ~ **Bill Thornton**

There's always a solution in steel

78

## Corollary to the Lower Bound Theorem

The admissible internal force field that maximizes the capacity is closest to the collapse solution.

Admissible is just another way of saying a system of forces that satisfies equilibrium.

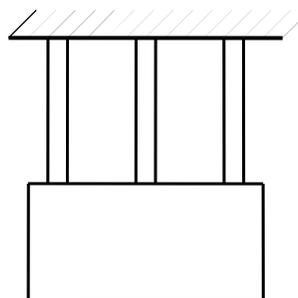

There's always a solution in steel

79

## An Example

As an example

- Assume a simple system of three identical tension members supporting a load.
- This is an indeterminate structure, though intuitively we know each bar supports an equal load.
- However if we assume the center bar supports a percentage of the load,  $x$ , and the results are plotted, we have a very simple example of the Lower Bound Theorem.

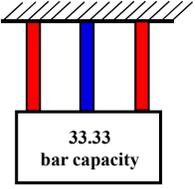

There's always a solution in steel

80

| 0.88 | 38.10  |
| 1.00 | 33.33  |

$x$  = the % of total load supported by center member  
 $P$  = total load supported with assumed load distribution

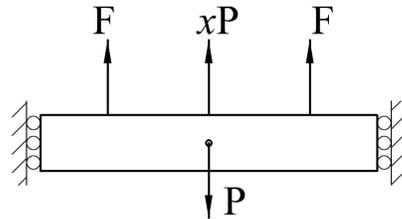

---

There's always a solution in steel

88

## Lower Bound Solution Three Bar Structure

$x = \% \text{ of Total Load } P$

Equilibrium:  $2F + xP - P = 0$

Limit States:  $F \leq 33.3$

$xP \leq 33.3$

$P \leq 100$

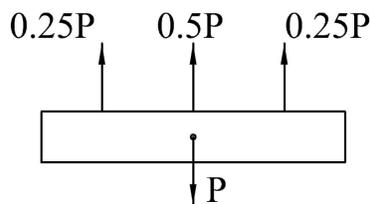

There's always a solution in steel

89

## Lower Bound Solution Three Bar Structure

Example: Let  $x = 0.5$

$0.5P \leq 33.3 \rightarrow P = 66.7 < 100 \text{ OK}$

$0.25P \leq 33.3 \rightarrow P = 133 > 100 \text{ NG}$

Solution:  $P = 66.7$

There's always a solution in steel

90

## **More Information on Ductility and Behavior of Steel**

Basic Concepts in Ductile Detailing of Steel Structures  
by Michael D. Engelhardt

From the 2009 NASCC series "Top Hits from Top Profs"

There's always a solution in steel

91

## **Comparison of Bracing Design Methods and Load Paths**

There's always a solution in steel

92

## Comparison of Methods

The next several slides will demonstrate the savings that can be obtained through a careful use of the topics discussed in this presentation.

A special emphasis is placed on load paths, but all the other considerations have also been accounted for in these optimal designs.

There's always a solution in steel

93

## Load Paths Have Consequences

**In Other Words...**

There's always a solution in steel

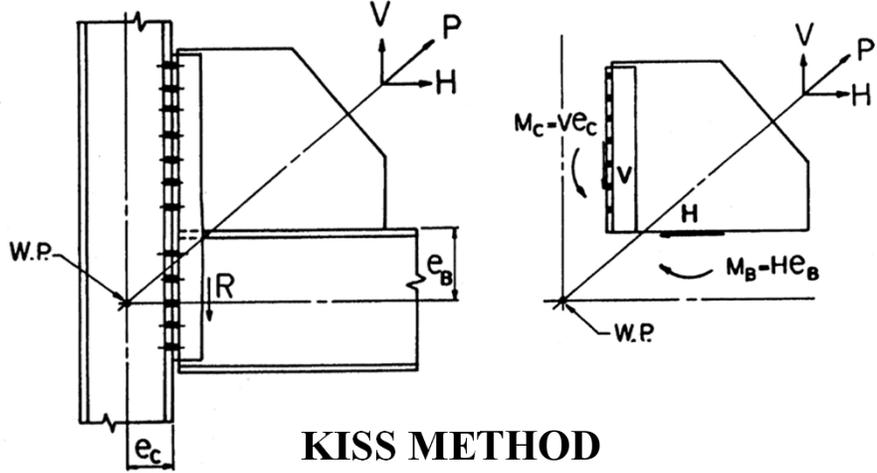

94

# Let's Look at the Bottom Line

There's always a solution in steel

## KISS METHOD (Keep it Simple, Stupid!) ADMISSIBLE FORCE FIELD

There's always a solution in steel

## The KISS method

- Was used with and without the couples  $M_B$  and  $M_C$ , but mostly without
- Was used with the brace vertical component on the column connection and the brace horizontal component on the beam connection
- Was used without regard to the Work Point position
- INADMISSIBLE FORCE FIELDS

There's always a solution in steel

97

## The KISS method

An inadmissible force field does not satisfy what William McGuire of Cornell, in another context, called “The niceties of Structural Mechanics”

McGuire, Steel Structures, Prentice-Hall, 1968, page 933

There's always a solution in steel

98

## The KISS method

In particular, the  
LOWER BOUND THEOREM IS  
INVALID  
If an inadmissible force field is  
used

There's always a solution in steel

99

## Kiss Method vs Uniform Force Method

Is there an economic reason to use  
KISS?

It **is** simpler, even with the couples

There's always a solution in steel

100

**DESIGN BY  
 THE KISS METHOD  
 GUSSET 52X43 1/2**

**DESIGN BY  
 THE UNIFORM FORCE METHOD  
 GUSSET 42X31 1/2**

**COMPARISON OF DESIGNS**

---

There's always a solution in steel

101

**KISS = \$840 PER CONNECTION**  
**UNIFORM = \$658 PER CONNECTION**  
**DIFFERENCE = \$182 PER CONNECTION**

**40 STORY BUILDING WITH 32 CONNECTIONS PER FLOOR**

**EQUALS**

**\$240,000 SAVED**

Taken From: Bill Thornton's "Last Bastion of Rational Design"

---

There's always a solution in steel

102

**PARALLEL FORCE METHOD  
(PFM)**

---

**ADMISSIBLE FORCE FIELD**

103

**UNIFORM FORCE METHOD  
VS  
PARALLEL FORCE METHOD**

---

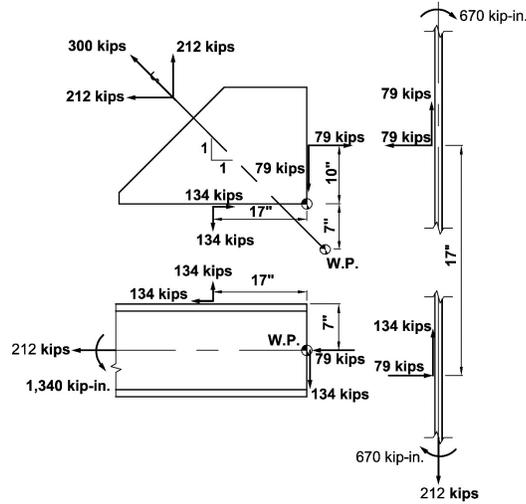

There's always a solution in steel

104

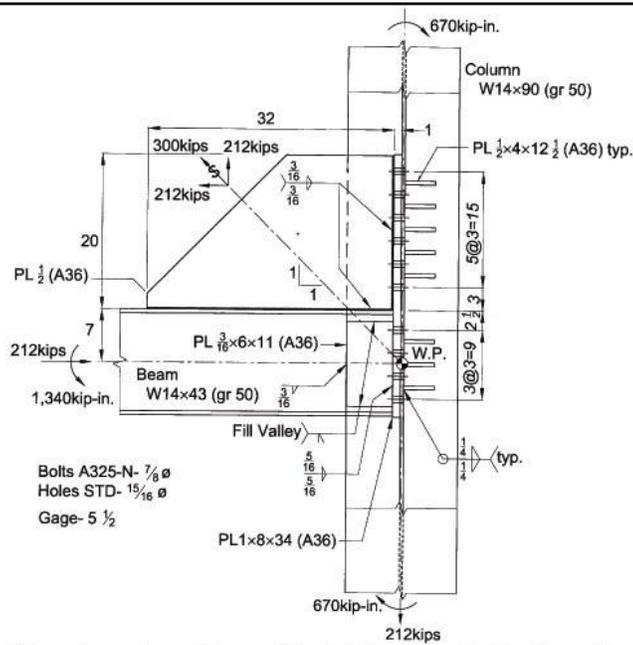

## Admissible Force Field, PFM

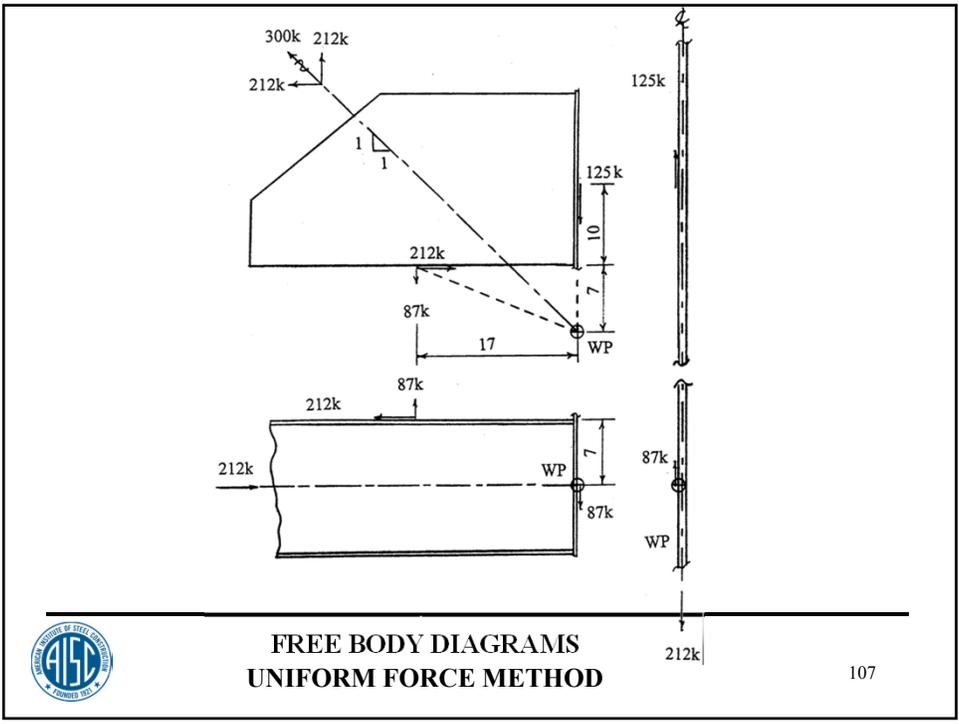

There's always a solution in steel

105

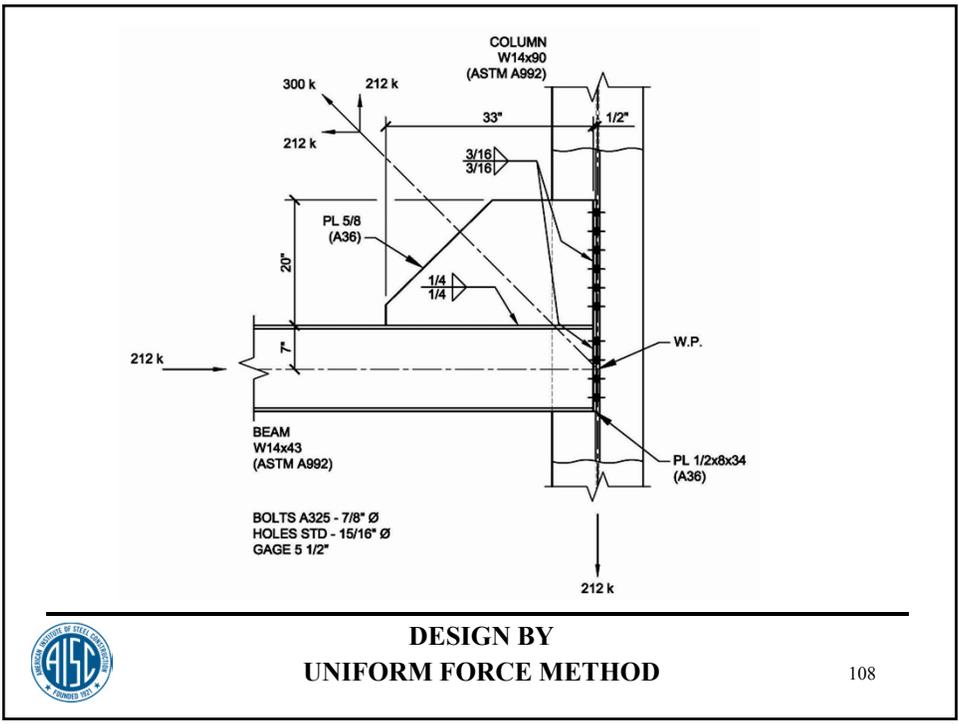

Design by Parallel Force Method

106

107

108

# **LOAD PATHS HAVE CONSEQUENCES**

**UFM Design with UFM  
admissible force field**

**Capacity is 320 kips**

There's always a solution in steel

109

# **LOAD PATHS HAVE CONSEQUENCES**

**UFM Design with KISS  
admissible force field**

**Capacity is 236 kips**

There's always a solution in steel

110

# LOAD PATHS HAVE CONSEQUENCES

**UFM Design with PFM  
admissible force field**

**Capacity is 86 kips**

There's always a solution in steel

111

# LOAD PATHS HAVE CONSEQUENCES

| METHOD | DESIGN | DESIGN STRENGTH |
|--------|--------|-----------------|
| UFM    | UFM    | 320 kips        |
| KISS   | UFM    | 236 kips        |
| PFM    | UFM    | 86 kips         |

**These results are for the design achieved by the UFM.**

There's always a solution in steel

112

A \$2 Million dollar savings compared to the original estimate was attributed to the connection design on these two projects.

There's always a solution in steel

Conventional and Extended Tabs replaced the more traditional double clips at the jumbo columns reducing both fabrication and erection costs.

There's always a solution in steel

The Uniform Force Method was used extensively in novel ways to optimize the connections.

There's always a solution in steel

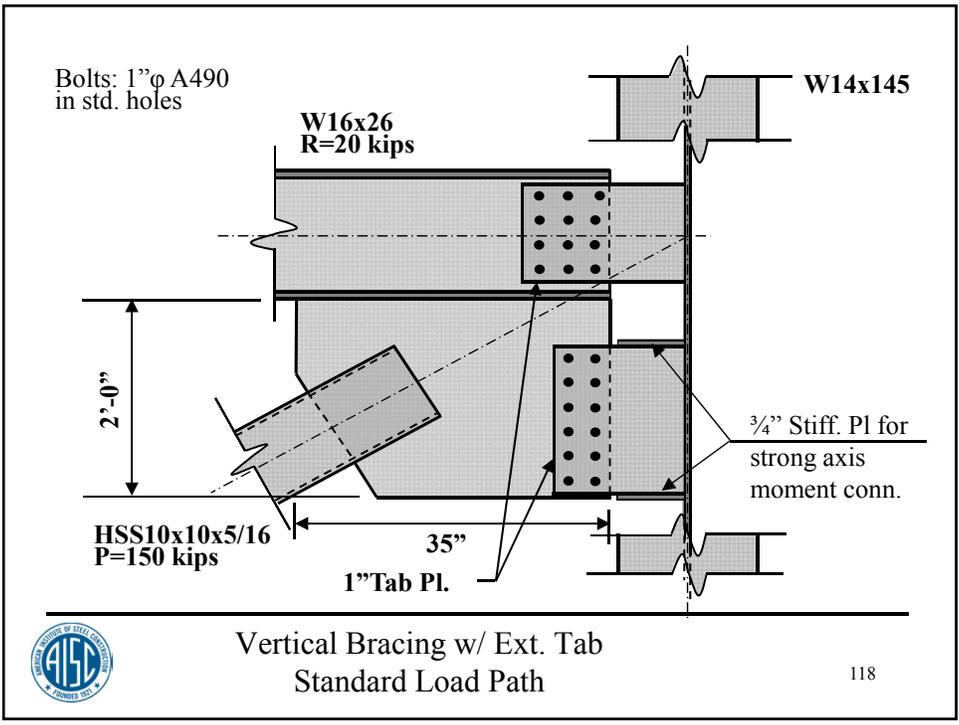

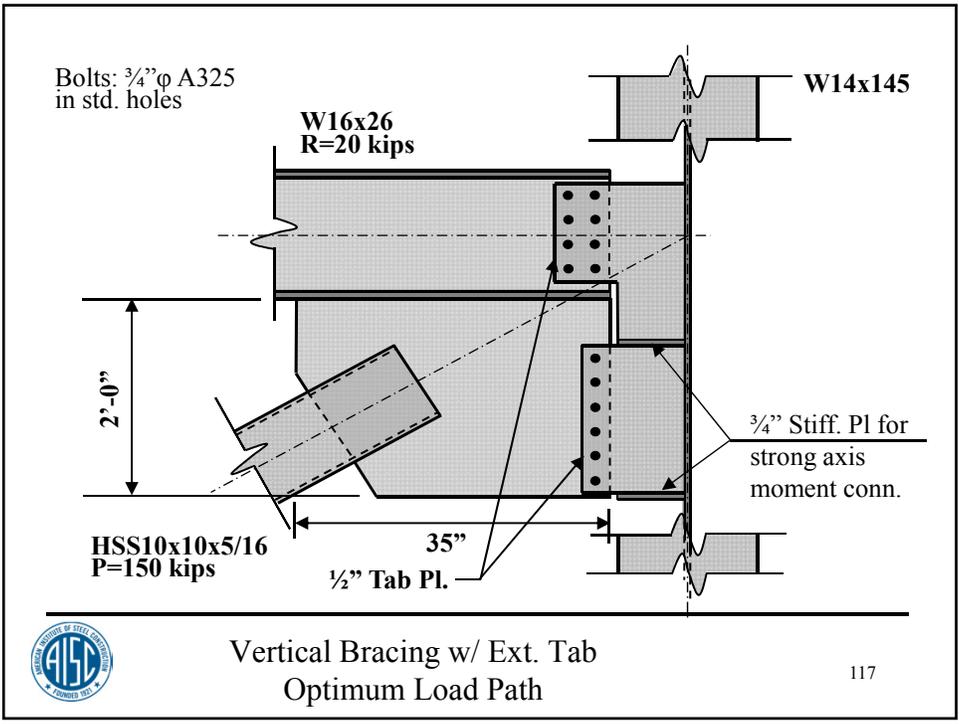

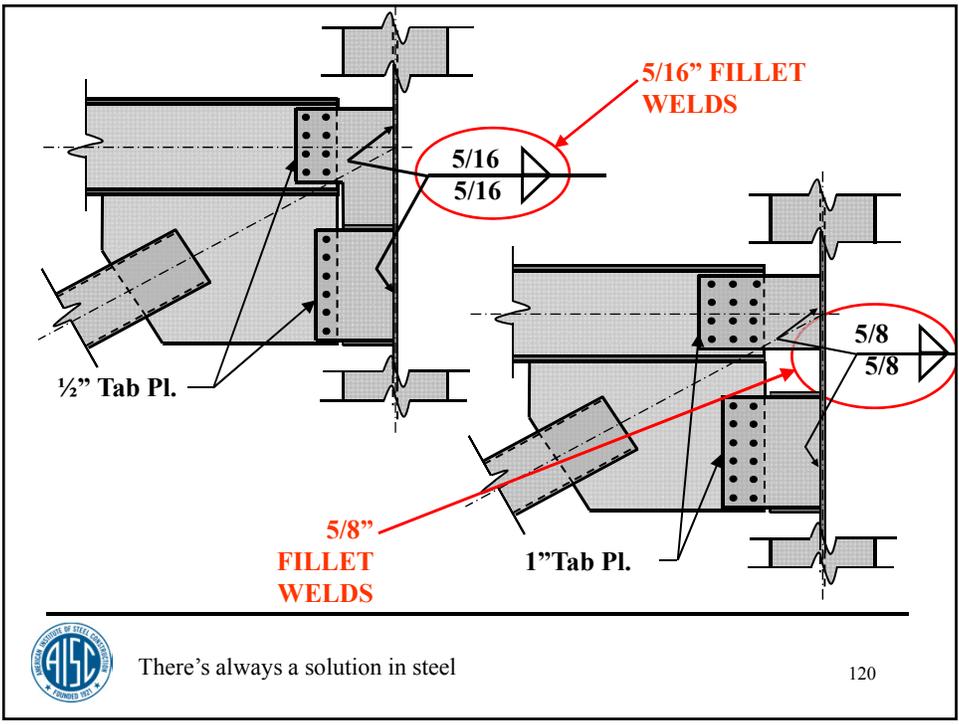

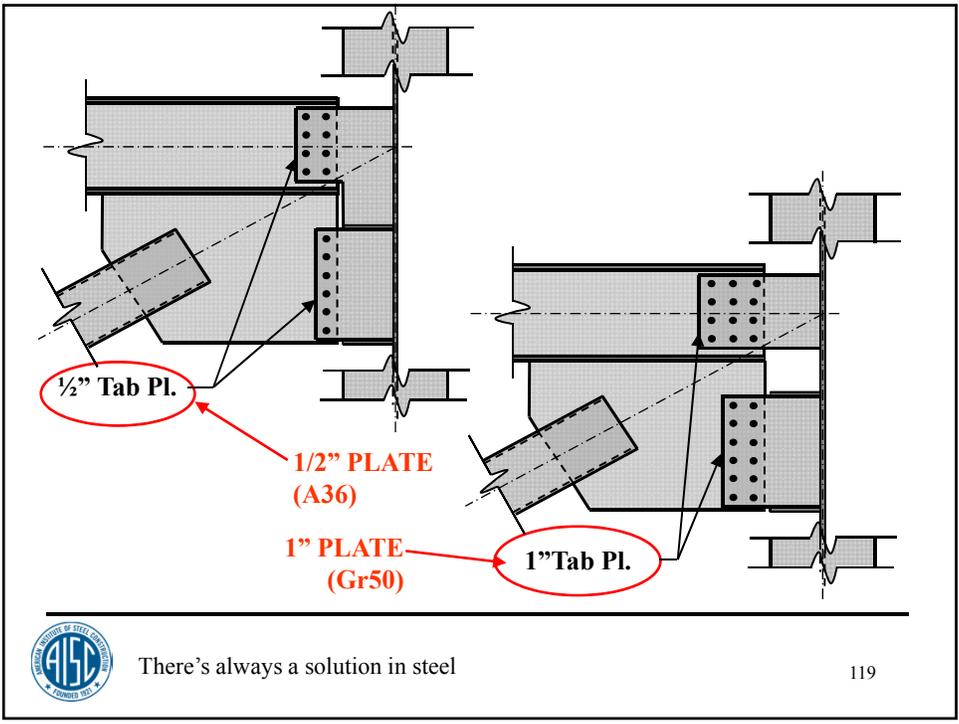

X-bolts were also used wherever the threads excluded condition could be assured without additional inspection.

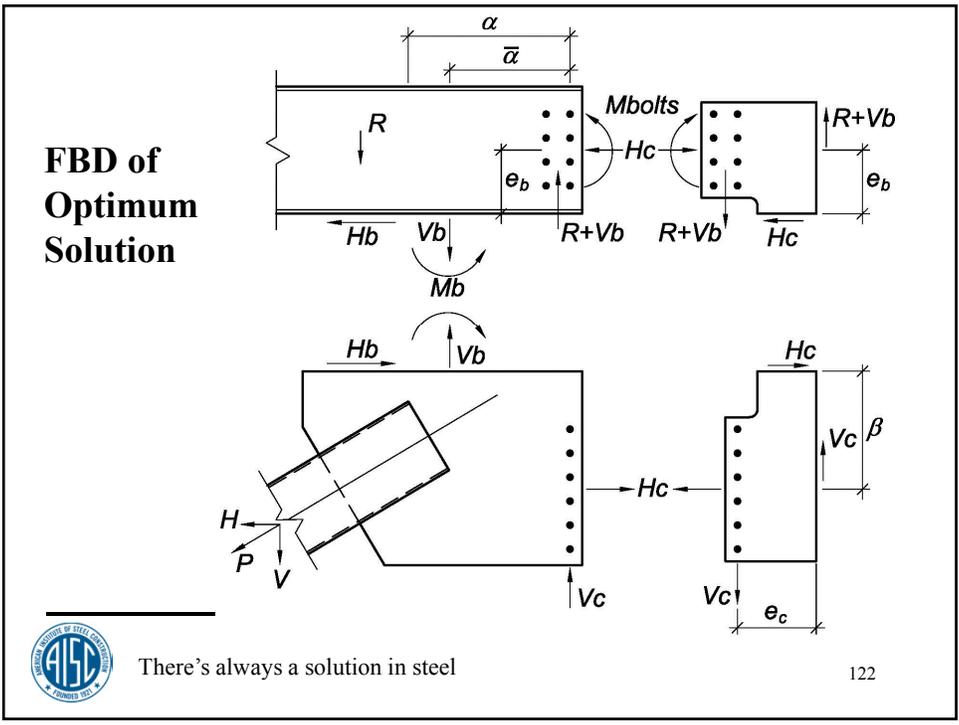

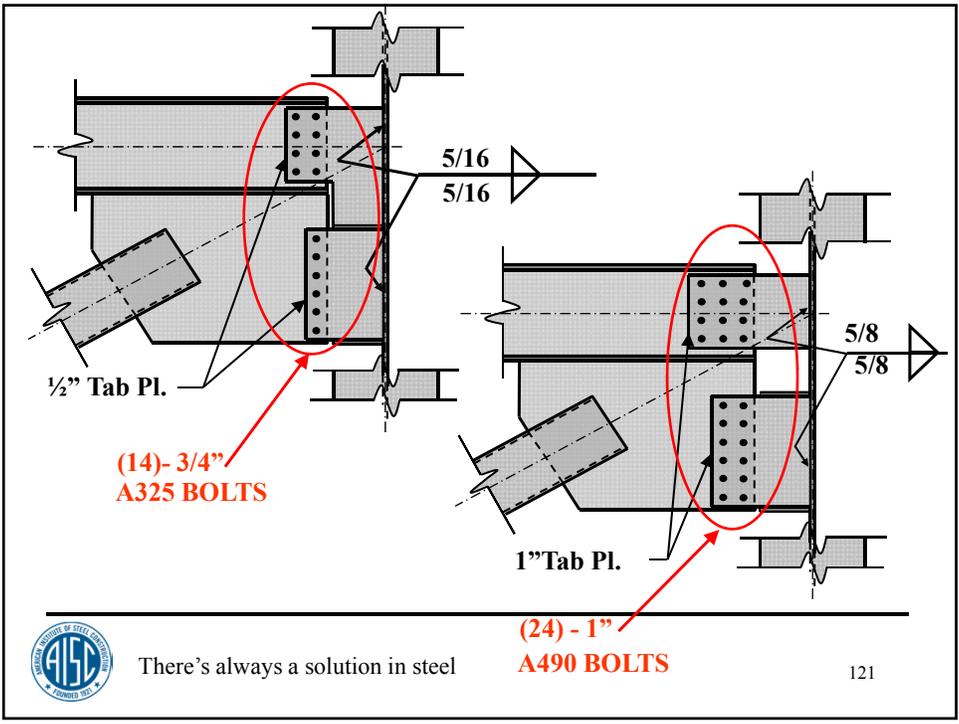

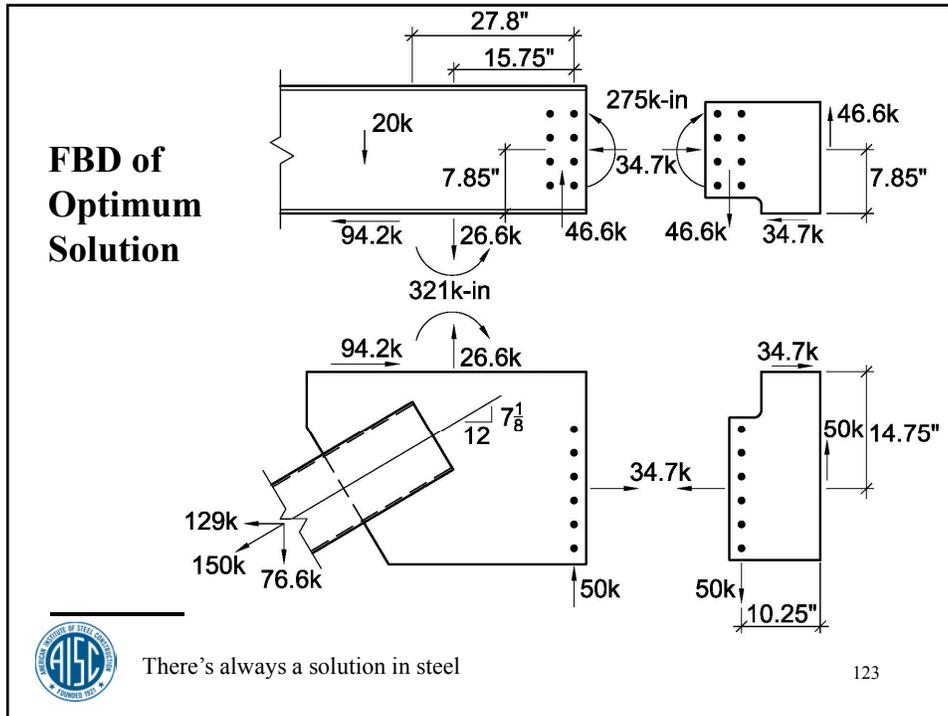

There's always a solution in steel

### Comparison of Design Results

## Summary

In this presentation we have reviewed the basic principals of structural mechanics and bracing design.

We have shown the design achieved depends on the load path (admissible force field) assumed.

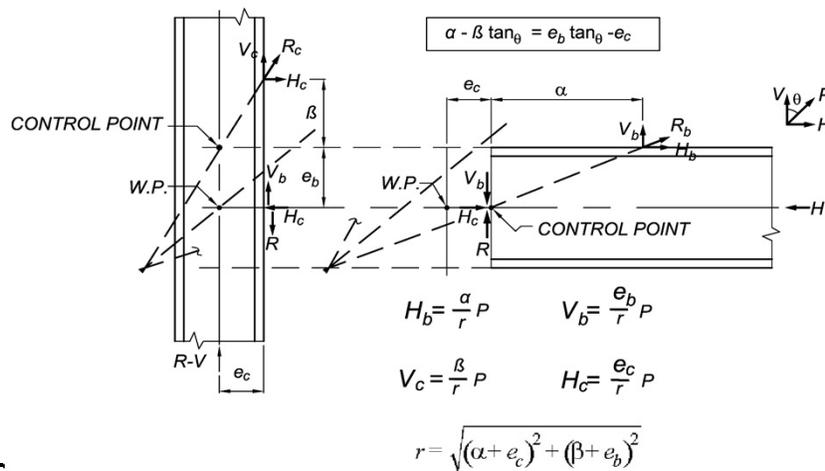

We have shown the importance of the Lower Bound Theorem for design

# Bracing Connections and Related Topics

By: William Thornton

---

There's always a solution in steel

## Questions?

---

There's always a solution in steel

## **Individual Webinar Registrants**

---

**Within 2 business days...**

- **You will receive an email on how to report attendance from: [registration@aisc.org](mailto:registration@aisc.org).**
- **Be on the lookout: Check your spam filter! Check your junk folder!**
- **Completely fill out online form. Don't forget to check the boxes next to each attendee's name!**

## **Individual Webinar Registrants**

---

**Within 2 business days...**

- **New reporting site (URL will be provided in the forthcoming email).**
- **Username: Same as AISC website username.**
- **Password: Same as AISC website password.**

## 8-Session Registrants

---

**One certificate will be issued at the conclusion of all 8 sessions.**

## 8-Session Registrants

**Access to the quiz: Information for accessing the quiz will be emailed to you by Thursday. It will contain a link to access the quiz. EMAIL COMES FROM NIGHTSCHOOL@AISC.ORG**

**Quiz and Attendance records: Posted Tuesday mornings.  
www.aisc.org/nightschool - click on Current Course Details.**

**Reasons for quiz:**

- EEU – must take all quizzes and final to receive EEU
- CEUs/PDHS – If you watch a recorded session you must take quiz for CEUs/PDHS.
- REINFORCEMENT – Reinforce what you learned tonight. Get more out of the course.

**NOTE: If you attend the live presentation, you do not have to take the quizzes to receive CEUs/PDHS.**

---

## 8-Session Registrants

**Access to the recording:** Information for accessing the recording will be emailed to you by this Wednesday. The recording will be available for two weeks. For 8-session registrants only. EMAIL COMES FROM NIGHTSCHOOL@AISC.ORG.

**CEUs/PDHS** – If you watch a recorded session you must take AND PASS the quiz for CEUs/PDHS.

## Thank You

**Please give us your feedback!**  
*Survey at conclusion of webinar.*
